LEVCHENKO DIANA

Moscow, Russia

📞 +7 (910) 416-37-10   ✉ diana-levchenko1@yandex.ru   ⭘ djdjenny

Skills

- **Languages:** Russian (native), English (B2)
- **Programming: Python**, SQL, C++, R
- **Technologies, libraries, frameworks:** Numpy, Pandas, Matplotlib, Pytorch, Sklearn, XGBoost, LightGBM, Statsmodels, OpenCV, NLTK, Word2Vec, Bootstrap, Cross-Validation
- **Major knowledge:** Math, Machine Learning, Deep Learning, Algorithms and Data Structures, Bioinformatics, Physics, Biology

Education

- **Moscow State University (MSU)**   Moscow, Russia
  Bachelour degree, Biology, Physiology department   *September 2019 – present time*

Work experience

- **Regulatory peptides lab**   Moscow, Russia
  Student   *October 2020 – March 2022*
  `Applied statistics` `Surgery skills` `Biochemistry`

  - 'Brain damage analysis after photoinduced ischemia on Panx1-knokout mice'. Results were presented on Lomonosov conference.

- **Teaching**   Tula, Moscow
  Biology teacher   *July 2019, February 2020*
  `Teaching`

  - Provided molecular biology and immunology courses in summer school associated with MCCME (Moscow Center for Continuous Mathematical Education). Prepared high-school students for biology olimpaids.

- **Hyperskill (Jet Brains Academy)**   Online
  Data Science topic writer   *January 2023 – present time*
  `Sklearn` `Teaching` `Math`

  - Writing **topics** for Hyperskill platform (e.g. **PCA**, **Polynomial Regression**). Developing comprehension and practice tasks for topics.

Projects

- **Molecular biology projects**
  `Sklearn` `PyTorch`   *October 2022 – December 2022*

  - I've attended ML in biology course developed by MSU Bioinformatics department.
  - During this course, lots of problems based on real-world data were solved.
  - Example tasks are presented in GitHub: ⭘ djdjenny

- **Projects made at MSU White Sea Biological Station**
  `Math` `MatPlotLib`   *August 2022*

  - Balanus balanus movement analysis.
  - Influence of magnetic field on Gasterosteus aculeatus locomotor activity analysis.

- **Statistical and exploratory data analysis (EDA)**
  `Matplotlib` `Seaborn` `Pandas` `Sklearn`   *December 2022 - February 2023*

  - Projects below were performed on real-life data with educational purposes.
  - Yandex Realty EDA with further analysis of the reasons affecting pricing.
  - Yandex Music EDA with users clustering.
  - Video games sales information EDA and recommendations on advertising for the client.

- **Building models**
  `Pandas` `Sklearn` `Seaborn` `Bootstrap`   *March 2023 - April 2023*

  - Projects below were performed on real-life data with educational purposes.
  - Model for client exodus prediction for banks based on historical data.
  - Well location selection. Risks and losses estimation, choosing the most profitable region.
  - Gold Refining Process Analysis. Built the model for prediction gold recovery rate based on mining and refining parameters.

- **Salary prediction by job description**
  `TF-IDF` `Sklearn` `Seaborn` `NLTK` `Word2Vec`   *March 2023*

  - As part of Second step in NLP Bootcamp.

Academic achiements: membership in the Moscow school teams in biology and physics; GPA 4.93.
